### INFESTATION!

Posted Tue, 2010-12-14 15:46

Today many Madagascar Hissing Cockroaches visited the library along with an 8th grader, who was using them for research purposes for his science fair project. I was informed that they have a 2-year lifespan and how to identify the males and females based on horns or a lack of horns. Although the 8th grade student was brave enough to handle them and make them hiss, Mrs. Frantz and I were not.
