## **K-12 Teacher Average Salaries in Public Schools “Adjusted” For Cost of Living Dollars 2008/2009**

<sup>1</sup> National Education Association: <http://www.nea.org/assets/docs/010rankings.pdf> (7-6-10)

<sup>2</sup> Missouri Economic Research and Information Center (2009 Average):  
[http://www.missourieconomy.org/indicators/cost\\_of\\_living/index.stm](http://www.missourieconomy.org/indicators/cost_of_living/index.stm) (7-7-10) The *Cost of Living Index* measures relative price levels for consumer goods and services in participating areas. The average for all participating places, both metropolitan and nonmetropolitan, equals 100, and each participant's index is read as a percentage of the average for all places. 100 is set as the average, states that have an index above 100 are deemed to have a cost of living above the national average and states that have a index below 100 are deemed to have a cost of living below the national average. The average in this table was determined by averaging the four quarters in 2009.

<sup>3</sup> Formula for Average Salaries adjusted for Cost of Living: This formula is determined by dividing the average salary by the average cost of living index percentage. The product is the adjusted salary, which reflects the value of a teacher salary of a particular state when the cost of living of that particular state is factor in.

<sup>4</sup> California would rank second highest in teacher salaries before the Cost of Living adjustment is factored in; with the Cost of Living adjustment factored in, California ranks nineteenth.
